

ATLAS SERIES

A traditional fabric building

Customization Options

Available from 24' - 108' Wide

The Atlas Building Series defines the traditional look of fabric covered buildings. Popular applications include barns, implement and equipment storage, commercial warehouses and storage buildings. Atlas' cover it all and are available in any length and any height.

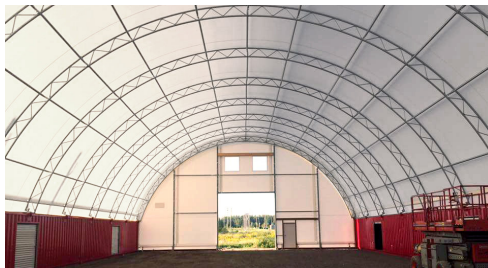

- **Insulated, warehouse storage solutions for quick, safe, and easy installation.**
- **Increase storage space with custom leg heights using web or I-beam legs and the option for side entrances.**
- **Free-span webbed truss building with a fabric cover for maximum interior space.**
- **Fabric buildings constructed with durable, and corrosion resistant hot-dip galvanized steel trusses.**

The Ideal Choice

Barns

Permanent fabric buildings allow for ample natural light and superior ventilation. The open layout provides more movement and arrangement options for barns.

Commodity Storage

Spacious enough for large machinery and vehicles. Eliminate exposure to weather conditions, rust, dirt and overall deterioration when vehicles are stored.

Warehouses

On-site storage to protect store merchandise, materials and other equipment. Our portable and temporary structures provide enough room to use as a warehouse or a workshop.

Our Benefits

Open Interior

No internal posts provides an ease of use and maximum storage capacity in all Atlas buildings.

Economical Option

Our Atlas buildings require a quick installation process using lower operational needs to save you money.

Customized Height

Atlas buildings can be customized to any height for overhead clearance space to accommodate large machinery.
