

# AGRICULTURAL STORAGE

**Space and Flexibility For Your Assets**

# Common Building Types

---

## Atlas

### Available from 24' - 108' Wide

The Atlas Building Series defines the traditional look of fabric covered buildings. Popular applications include barns, implement and equipment storage, commercial warehouses and storage buildings.

## Apex

### Available from 53' - 100' Wide

The Apex Building Series maximizes interior usable space thanks to its tall side walls. The slightly curved roof profile, sharp peak and standard sidewall legs give the Apex style and character, without sacrificing functionality.

## Easy Access

### Available from 38' - 67' Wide

The Easy Access Building Series covers your most valuable products while allowing unprecedented access. Unique to this style, choose either end or side (up to an entire side) openings to maximize traffic flow and access. Easy Access buildings are often used for crop, feed, equipment, and vehicle storage.

# The Ideal Choice

## Farm Equipment Storage

Safely store your tractors, loaders, cutters, tools and more while gaining the space you need to maintain organized and efficient operations.

## Hay and Feed Storage

A perfect way to store, protect, and access livestock feed and prevent hay spoilage and decomposition by using our fabric-covered structures.

## Storage Sheds

Store your smaller tools and equipment without taking away too much space from your property with economical fabric structures.

# Benefits

### Safety First

Keep your employees safe while they work in our fully engineered structures.

### Return on Investment

Our structures require a low-cost investment compared to traditional buildings, and lower operational needs to save you money.

### Superior Engineering

As an industry leader, we use cutting edge technology to engineer your building to your exact site loads, location, and application.

# Customization Options

- Option of an open side door as well as several door sizes and types — bifolds, overheads, fabric doors
- Several durable foundation options including screw piles and concrete blocks
- Column-free interiors with optimal heights to accommodate conveyors and machinery
- Controlled features including heating, lighting, insulation, and ventilation
