

DAIRY

Healthy Animals and Economic Barns

Common Building Types

Atlas

Available from 24' - 108' Wide

The Atlas Building Series defines the traditional look of fabric covered buildings. Popular applications include barns, implement and equipment storage, commercial warehouses and storage buildings.

Apex

Available from 53' - 100' Wide

The Apex Building Series maximizes interior usable space thanks to its tall side walls. The slightly curved roof profile, sharp peak and standard sidewall legs give the Apex style and character, without sacrificing functionality.

Epic

Available from 80' - 120' Wide

The Epic Building Series has the look of a traditional building and all the benefits of a fabric building: natural light, superior ventilation, and no interior columns. A popular style for dairy buildings, the Epic's straight wall design offers flexibility of door locations and sidewall features.

The Ideal Choice

Free-stall barns

Our free-stall barns possess a more desirable environment for herds, providing more movement and arrangement options.

Dairy Cattle Barns

Perfect for commercial dairy farms and small family herds alike, fabric barns allow for modular configuration within the structure.

Feedlot & Equipment Storage

A sheltered space for all kinds of storage. Keep feed, equipment, vehicles, and animals dry throughout the season with a climate controlled fabric structure.

Benefits

Free Span Interior

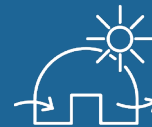

Our free span interiors reach up to 200 feet wide and are easily extendable for ease of use and maximum storage capacity.

Low Operational Costs

Natural light and airflow keeps your environment conducive to proper livestock health.

Bright & Dry

Our fabric buildings offer more natural light and ventilation than traditional buildings, creating a healthy and pleasant environment.
