

SALT & SAND

Protecting your Assets

Common Building Types

Atlas

Available from 24' - 108' Wide

The Atlas Building Series defines the traditional look of fabric covered buildings. Popular applications include barns, implement and equipment storage, commercial warehouses and storage buildings.

Genesis

Available from 80' - 200' Wide

The Genesis Building Series is well suited to a variety of commercial and industrial applications, including salt and sand storage buildings, manufacturing facilities, warehousing, dairy barns and equine riding arenas. With a clear span interior, Genesis buildings offer a large amount of covered but unobstructed space for your operations.

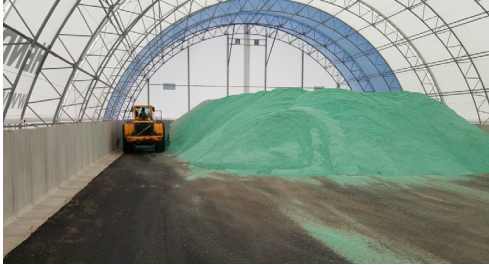

Magnum

Available from 66', 73' and 80' wide profiles

Our Magnum Building Series with Britespan is one of a kind in the fabric building market. Each profile has the option of either a 10 or a 16 high leg and is ideal for any operations that require maximum height clearance and cubic storage.

The Ideal Choice

Sand & Salt Dome Storage

Our installations are durable, fixed storage domes that have no obstructing interior columns, so vehicles and equipment can easily move in and out.

Palletized Salt Storage

Our spacious, dome-shaped structures are ideal for palletized salt storage that's easy to navigate while accommodating forklift use.

Mixed Use Material Storage

Salt can be safely stored and kept dry under our temporary, domed fabric structures in convenient, roadside locations.

Benefits

Spacious Interior

Our free span interiors reach up to 300 feet wide, so you can maximize your fertilizer storage capacity.

Corrosion Resistant

Hot dip galvanized structures and optional Super Shield rubberized coating protects against corrosion associated with salt and sand storage.

Return on Investment

These structures require no shingling and little maintenance compared to traditional buildings, so you can rest easy knowing your investment is protected.

Customization Options

- Add buildings outside of concrete walls for extra covered, easily-accessible space
- Suspend conveyors from trusses to eliminate concrete columns and maximize space
- Expand heights or have multiple leg heights to work with concrete foundation of choice
- Design mezzanines and lean-tos for accessible drive-through and loading bay options
